Aujas Identity and Access Management

DATASHEET

Aujas Cybersecurity offers cost-effective enterprise solutions and flexible engagement models, focusing on maximizing ROI for businesses. Our approach encompasses a cyclical process that integrates security considerations throughout, starting with establishing foundational systems and progressing through standardization, transformation, and innovation. We anticipate and respond to industry trends, offering end-to-end cybersecurity services including Advanced Application Security, Cloud Security Operations, DevSecOps integration, and Consumer Identity & Access Management (CIAM). This ensures holistic protection and user access control, positioning us as a trusted partner in navigating the cybersecurity landscape.

Identity and Access Management (IAM) for **secure user access**

Today a wide range of users, including employees, customers, contractors, bots, IoT devices, and automated workloads, interact with resources distributed across on-premises, remote, and cloud environments. This makes it difficult to control user behavior and access critical assets.

Without effective IAM, organizations are vulnerable to cyber threats like unauthorized access, breaches, and compliance issues. IAM initiatives provide each user with a distinct digital identity and access privileges based on their role, compliance needs, and other factors. This helps to control access to resources, reduce security risks, and ensure compliance across the organization's infrastructure.

Aujas IAM

Aujas Cybersecurity's IAM services empower organizations with comprehensive control over digital identities within their digital systems, ensuring a personalized consumer experience across multiple channels. By facilitating remote work and implementing zero-trust security measures, we enable seamless and secure access to critical resources. Our expertise extends to setting up modern cloud and hybrid systems interconnected through digital identities, providing unparalleled visibility into access permissions and assignments. Through these services, clients achieve enhanced control, security, and efficiency in managing their digital ecosystems.
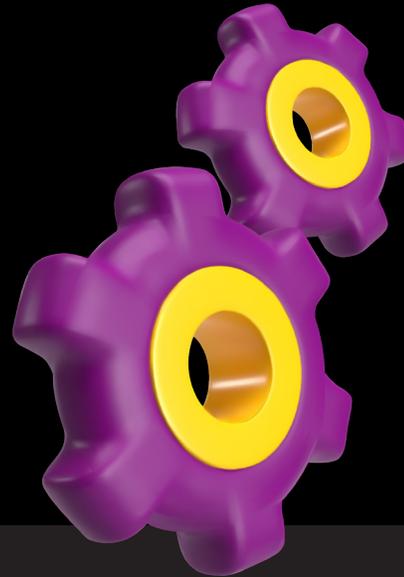

Our IAM services include:

Foundation services:

Accelerator-enabled services to establish a role framework and access control model, providing a solid foundation for a robust IAM program.

- **Identity Governance and Administration:** Our time and scope bound packaged solution swiftly sets up IAM environments for business users safeguarding access to your digital assets and services.

- **Privileged IAM:** A time and scope-bound packaged solution to set up IAM environments for admins rapidly.

Optimization services:

Services to help IAM and security leaders rapidly enhance and achieve their vision as their business grows.

- **Managed IAM services:** A one stop shop for all IAM needs that drives efficiency. You focus on your vision and strategy while we execute and operate IAM services.

- **IAM application onboarding:** Our innovative solution integrates and protects your heterogeneous apps, increasing the footprint of your IAM solutions.

Transformation services:

Early adopter services to transform and modernize IAM programs from IT admin tools to business enablers.

- **Robotics-driven IAM:** Our innovative robotics-driven IAM, streamlines processes, extends coverage, and expedites deployment, delivering unparalleled efficiency and effectiveness.

- **Risk Aware IAM:** Our end-to-end preventive, detective, and corrective controls enable preemptive actions, ensuring enhanced security and peace of mind for your business.

- **PAM for DevOps:** Designed specifically for organizations embracing DevOps practices, this solution ensures that privileged access is secure, compliant, and seamlessly integrated into your workflow.

- **Consumer IAM Solutions:** Decentralized access control for microservices provides your users with seamless and secure access to your organization's resources across diverse platforms and applications.

What sets **us apart?**

Outcome-based model

Delivering tangible results aligned with your business objectives

Hybrid delivery approach

Flexible delivery options tailored to your organization's needs

Wide technology coverage

Expertise across a broad range of IAM technologies and products

Advanced strategy consulting

Strategic insights to optimize your IAM initiatives

Center of Excellence (CoE)

Access to cutting-edge IAM solutions and best practices

Enhancement factory

Continuous improvement and optimization of your IAM infrastructure

300
Practitioners with implementation experience using specific IAM products

200+
IAM Clients

450+
IAM projects executed

Success **stories**

Leading Global Fintech Company

We efficiently onboarded over 600 applications for a leading global fintech company. This involved migrating their CA Siteminder applications to the Ping Suite for modern access management. We also leveraged SailPoint for application onboarding to automate provisioning, thus ensuring a smooth and secure onboarding process.

A Fortune 500 company

We executed a Privileged Access Management (PAM) program for a Fortune 500 company, focusing on upgrading a legacy CyberArk platform to the latest version, migrating 60K privilege accounts, and achieving regulatory compliance. Through a strategic approach involving CyberArk specialists, agile methodology, and OEM support, we delivered a streamlined PAM solution, enhanced security posture, and reduced operational overhead. The accelerated deployment of CyberArk components and adherence to industry best practices ensured timely MRA remediation, ultimately safeguarding critical assets and meeting regulatory requirements.

Leading American bank

We led an IAM initiative for a leading bank, resolving MRA issues in de-provisioning access processes across numerous applications. Leveraging SailPoint IIQ and Azure SSO, integrated with ServiceNow, we swiftly onboarded applications, meeting regulatory requirements while fortifying security measures. The tech-driven approach ensured rapid deployment, compliance, and enhanced security for the client.

About **Aujas Cybersecurity**

Aujas Cybersecurity empowers clients with enhanced security resilience by minimizing the potential for attacks, threats, and risks. We specialize in architecture risk analysis, comprehensive threat modeling, rigorous penetration testing, and secure coding guidelines. By partnering with us, you can strengthen your security defenses and maintain a robust security posture.
