

AI's New Summit: Fortifying Cybersecurity for the Digital Frontier

Feature Highlights:

Origamis AI: Strengthening NuSummit's Secure AI Foundation

Now part of **NuSummit's Data & AI portfolio**, **Origamis AI** brings an enterprise-grade orchestration platform for deploying and managing AI agents and intelligent workflows, on-premises or across any cloud. Built with integrated guardrails for governance, observability, cost control, cybersecurity, and responsible AI, it enables organizations to move confidently from pilots to production-scale, outcome-driven AI systems.

The integration advances NuSummit's mission to make AI secure, explainable, and compliant, supporting enterprises in using generative AI effectively across critical operations.

Event Spotlight

NuSummit at Microsoft Ignite 2025

Booth #5626

- Live Demos • Secure AI • Zero Trust
- Enterprise Transformation

At **Microsoft Ignite 2025**, **NuSummit** and **Microsoft** are coming together to showcase how AI, data, and cybersecurity converge to create trusted, resilient enterprises on secure cloud foundations.

What's Happening

AI has become the new engine of innovation. As organizations scale generative AI and automation, attack surfaces are widening, exposing gaps in data governance, model integrity, and cloud resilience. Over **80% of enterprises** are re-examining their security frameworks to keep pace.

At **Microsoft Ignite 2025**, **NuSummit** will showcase how **secure AI foundations**, **Zero Trust frameworks**, and **responsible automation** are redefining enterprise defense.

Why It Matters

AI without security is a risk. Security without AI is stagnation. Leaders, especially in financial services, must balance innovation with compliance. NuSummit is helping organizations build **trusted AI ecosystems** that are governed, explainable, and resilient, enabling innovation with confidence.

Where Intelligent Security is Headed

As AI becomes central to enterprise transformation, NuSummit is charting this next chapter with an integrated vision built on:

Secure AI Foundations

Modernized cloud and data built for protection, visibility, and compliance.

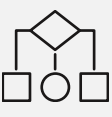

Operationalized Responsible AI

Built-in guardrails for governance, transparency, and cost control.

AI Orchestration at Scale

Unified platforms for securely deploying AI agents and workflows.

Collaborative Defense

Microsoft and NuSummit partnering to strengthen the digital frontier.

Zero Trust for AI Systems

Identity, access, and behavior verification across models and data flows.

Insights

Blog: Cybersecurity in the Age of Intelligent Systems

At Microsoft Ignite 2025, we're exploring how AI and cybersecurity co-evolve to secure the next generation of digital infrastructure. From risk detection to autonomous operations, trusted AI and cyber intelligence are shaping enterprise resilience for 2026 and beyond.

Use Cases

Real-world use cases that demonstrate how secure AI and advanced analytics can create measurable outcomes across BFSI:

- Gaining a Competitive Edge with Market Intelligence
- Accelerating Innovation with AI-Driven Product Ideation
- Reducing Compliance Risk with AI-Powered Document Summarization
- Improving Data Quality with Augmented Security Master Updates

Closing Thoughts

The future of AI belongs to those who build it securely. With **Origamis AI** and a focus on governed innovation, **NuSummit** is advancing trusted, intelligent systems for the digital frontier.

Stay connected with **ThoughtHive** as we shape the intersection of AI, data, and cybersecurity, responsibly and at scale.
